

Amruth Krishnan M

amruth.krish007@gmail.com — +91 81380 30975 — Kerala, India

Professional Summary

Entry-level Software Engineer with a strong foundation in Python, Java, and Machine Learning, and hands-on experience developing AI and IoT-based applications. Proficient in data structures and algorithms, with a focus on building efficient, scalable solutions, and eager to contribute to high-impact software systems.

Technical Skills

- **Programming Languages:** Python, Java, C, C++, JavaScript
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Web Technologies:** HTML, CSS
- **Technologies:** Machine Learning, IoT, Deep Learning
- **Tools & Platforms:** Linux, MS Office, Android Studio, Arduino, Git, VS Code
- **Concepts:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Education

Master of Computer Applications (MCA) APJ Abdul Kalam Technological University (KTU), Kerala CGPA: 8.41	2024 – 2026
B.Sc. Computer Science University of Calicut, Kerala CGPA: 8.133	2021 – 2024
Class XII Board of Higher Secondary Examinations, Kerala Percentage: 89.91%	2021
Class X Central Board of Secondary Education (CBSE) Percentage: 83.4%	2019

Projects

Wild Alert: Real-Time Wildlife detection and Alert System • Engineered a real-time wildlife detection system using YOLOv8 to identify animals and vehicles from live camera feeds and analyzing potential collision risks. • Integrated an IoT-based alert mechanism using ESP8266 and MQTT to trigger roadside warnings (LED, buzzer, LCD) for preventing animal-vehicle accidents.	GitHub
Personal Posture Evaluator • Developed a real-time posture evaluation system using computer vision and pose estimation to analyze body movements and provide accuracy-based scoring. • Implemented exercise and yoga tracking with rep counting, posture feedback, and voice guidance using a Flask-based web interface.	GitHub
Waste Classifier and Disposal Recommendation System • Created a deep learning-based system to classify waste using Convolutional Neural Networks (CNNs). • Enhanced sustainability by enabling intelligent and eco-friendly waste sorting.	GitHub
Smart Shopping Cart (IoT + RFID) • Built an IoT-based smart cart using RFID technology for automated product detection. • Designed a web interface for real-time cart updates and automated billing display.	GitHub

Certifications

- Machine Learning Onramp – MathWorks
- Generative AI – Google Cloud
- Cyber Security – IBM
- Android Development with Compose – Google
- Accounting Fundamentals – TCS iON
